

Portfolio Report Agent — Case Study Outline

Role: Business Analysis · Reporting Automation · Portfolio Operations
Company: Aosenuma.ai (co-op) · Jan–Jun 2026
Stack: Notion Custom Agents, Projects Database, Open Tasks, Mermaid Gantt

Problem

Every Monday, PMs manually rebuilt the same **Actuals vs Forecast** portfolio deck:

- Pulled dates, task counts, and status notes from multiple Notion databases
- Re-formatted Gantt views and executive summaries by hand
- ~**2.5 hours** of copy-paste per week
- Portfolio started at **7 projects** at co-op start; **2 were halted for resource crunch**, leaving **5 active**

My role

- Defined reporting requirements and acceptance criteria with PM stakeholders
- Mapped canonical data sources (Projects DB, Open Tasks)
- Wrote agent instructions: reference reports = format only; live metrics = source DBs
- Configured weekly **Monday 8:00 AM** trigger
- Validated output against PM review checklist for four consecutive runs

Solution

Notion custom agent produces each week for **5 active projects**:

1. Executive summary (5 active · 2 halted · 7 total at portfolio start)
2. Forecast vs actual variance flags
3. Portfolio-level Gantt (Mermaid)
4. One project deep dive
5. Top portfolio risks and weekly action items

Outcome

Metric	Before	After
Manual prep time	~2.5 hrs/week	~20 min review/week
Active portfolio scope	7 at start → 5 active	5 active (automated)
Halted projects	—	2 (resource crunch)
Data integrity	Conflicting deck copies	Single canonical report
Schedule	Ad hoc	Every Monday 8 AM

Data flow (as-is → to-be)

[Before] PM → copy from DBs → paste into deck → email leadership

[After] Trigger → Agent reads Projects DB + Tasks → generates report → PM reviews → publish

Artifacts

- [Redacted sample report \(PDF\)](#). — structural proof; client data removed

Redacted for portfolio use. Methodology and structure preserved; sensitive client data removed.
