

Business Requirements Document

Initiative: UI/UX Guidelines & Design System (design.md) · Author: [Redacted] · Version: 1.2 · Status: Approved · Date: Mar 2026

1. Executive Summary

Live AI products lack a shared UI baseline, causing inconsistent components, rework in review cycles, and conflicting design decisions across teams. This BRD defines requirements for a tokenized design system, 168-point compliance audit process, and 7 UI-only consistency prototypes used for validation and LLM-ready design context.

2. Business Objectives

- Establish a single source of truth for UI tokens, components, and accessibility rules across Notion, GitHub, and code.
- Increase design compliance from 85% to 92% on live products within one audit cycle.
- Reduce UI review rework by providing repeatable audit scorecards for leadership.
- Enable LLM-assisted design workflows with structured, machine-readable UI specifications.

3. Scope

In scope	Out of scope
Token file (colors, spacing, typography) Component standards & accessibility rules 168-point audit checklist 7 UI-only consistency prototypes Compliance scorecards for live products	Net-new product features Production deployment of prototypes Third-party design tool migration

4. Stakeholders

Role	Responsibility	RACI
Product Leadership	Approve design system adoption	A
PM / BA (Co-op)	Requirements, audits, scorecards	R
Engineering Leads	Implement tokens in code	R
Design Review	Validate checklist & prototypes	C

5. Functional Requirements

ID	Requirement	Priority
FR-01	Publish machine-readable token file synced to GitHub and Notion	Must
FR-02	168-point checklist covering color, typography, spacing, a11y, components	Must
FR-03	Per-product compliance scorecard with gap notes and remediation owner	Must
FR-04	7 UI-only prototypes for consistency stress-testing (not live launches)	Should
FR-05	Executive summary rollup for leadership review cadence	Must

6. Success Metrics

Metric	Baseline	Target
Design compliance (live products)	85%	92%
Guideline adoption	—	~80%
Products audited with scorecards	0	5 live products

7. Assumptions & Constraints

- Prototypes are for validation and LLM context only—not production releases.
- Live portfolio may change (7 projects at co-op start; 2 halted; 5 active)—audits apply to active live products.
- Documentation maintained in Notion with GitHub as reference implementation.
