User Stories & Acceptance Criteria

Epic: Portfolio Actuals vs Forecast Automation · **Sprint:** Reporting Ops · **Author:** [Redacted] · **Date:** Feb 2026

Epic Goal

As a **portfolio PM**, I need a weekly Actuals vs Forecast report generated from canonical databases so that leadership receives one accurate status view without manual copy-paste (~2.5 hrs → ~20 min review).

US-01 · Weekly report trigger

As a portfolio PM, I want the agent to run every Monday at 8:00 AM, **so that** the report is ready before the weekly cadence meeting.

Acceptance criteria:

- Scheduled trigger fires at 8:00 AM ET each Monday
- Manual re-run available in Notion without changing schedule
- Failure notification logged if data pull incomplete

US-02 · Live data integrity

As a PM, I want all metrics pulled from Projects DB and Open Tasks, **so that** no stale figures from prior decks appear in the report.

Acceptance criteria:

- Reference reports used for format/layout only—not live metrics
- Each executive summary row traces to Projects DB record
- Task counts match Open Tasks DB at generation time

US-03 · Portfolio executive summary

As leadership, I want a single-page portfolio summary for all active projects, **so that** I can spot variance without opening five separate decks.

Acceptance criteria:

- Covers 5 active live projects (7 at co-op start; 2 halted excluded from active roll-up)
- Columns: status, phase, forecast dates, actual dates, variance flag, task completion
- Halted projects marked separately—not counted as active

US-04 · Gantt & deep dive

As a PM, I want a portfolio Gantt and one project deep dive per week, **so that** we rotate visibility across the portfolio.

Acceptance criteria:

- Portfolio-level Gantt with forecast vs actual bars
- One full deep dive: milestones, task tie-out, risks, actions
- Mermaid-compatible output in production Notion workflow

US-05 · PM review workflow

As a PM, I want to review and publish in ~20 minutes, **so that** reporting prep does not consume half my Monday.

Acceptance criteria:

- Draft generated before 8:15 AM
- PM validates variance flags and adds meeting-note enrichment when available
- Published report is the single canonical version for the week

Definition of Done (Epic)

Criteria	Status
4 consecutive weekly runs validated against PM checklist	Met
Manual prep time reduced from ~2.5 hrs to ~20 min review	Met
Zero conflicting status figures between report and source DBs	Met
